# EXECUTIVE SUMMARY

This report summarizes weed management expenditures and accomplishments across all three divisions of Montana Fish, Wildlife and Parks (FWP) during Fiscal Year 2021 (FY21), which includes July 1, 2020 through June 30, 2021.

FWP directly manages 511,080 acres across 497 distinct sites throughout the state and is responsible for noxious weed management on most of these areas. Estimated infested acres for all FWP lands for FY21 were 56,386, equaling approximately 19% infested. The acreages associated within each separate Division are as follows:

- The Fisheries Division manages approximately 17,186 acres in fee title and leased lands across 355 sites, primarily Fishing Access Sites (FAS). Estimated noxious weed infested acres for FWP lands managed by the Fisheries Division were 2,720, equaling approximately 16% infested in FY21. Utilizing chemical, mechanical, biological control and revegetation treatment methods the division treated 1,063 acres, equaling approximately 39% of infested acres treated for the fiscal year.

- The Wildlife Division manages approximately 451,313 acres in fee title and leased lands across 79 sites, primarily as Wildlife Management Areas (WMA). Estimated noxious weed infested acres for FWP lands managed by the Wildlife Division were 48,759, equaling approximately 11% infested in FY21. Utilizing chemical, mechanical, biological control and revegetation treatment methods the division treated 7,034 acres, equaling approximately 14% of infested acres treated for the fiscal year.

- The Parks Division manages approximately 42,470 acres in fee title and leased lands across 58 sites, primarily as State Parks (SP). Estimated noxious weed infested acres for FWP lands managed by the Parks Division were 4,869, equaling approximately 11% infested in FY21. Utilizing chemical, mechanical, biological control and revegetation treatment methods the division treated 2,785 acres, equaling approximately 57% of infested acres treated for the fiscal year.

FWP continues to implement an integrated approach to controlling noxious weeds, as further described in FWP's statewide noxious weed plan (2008). That plan can be accessed and downloaded using the following web link: https://fwp.mt.gov/conservation/habitat/noxious-weed-management

Using an integrated approach to managing weeds, FWP staff prioritize efforts and select the most appropriate technique for addressing each noxious weed issue. For instance, infestations with a high likelihood of spreading to new locations are a priority for herbicide treatment, including parking lots, roads, and other high public use areas. New infestations in areas that previously lacked infestations or new noxious weed species are also a high priority for treatment and eradication, if possible. Vast infestations often require a different approach in collaboration with neighboring properties and county weed coordinators. Biocontrol in combination with herbicide applications at strategic locations are commonly used as a long-term solution where infestations are extensive, spanning multiple ownerships.

FWP also strives to take an ecological approach to weed management and prevention. This includes, where possible, avoiding ground disturbance, minimizing impacts from construction or other management activities, and being mindful to avoid impacting non-target vegetation when implementing weed control measures.

During FY21 FWP treated over 6,439 acres with herbicides, equaling about 11% of reported estimated infested acres (Table 2) for the year. Combined with other types of treatments – mechanical, biocontrol control, and revegetation the department treated approximately 10,881 acres, equaling 19% of the total agency estimated infested acres. Noxious weed treatment expenditures were an estimated total of $512,119.87 agency wide for the fiscal year (Table 3). Some personnel costs, training, education and outreach, and other aspects of weed management and prevention are not included in these figures.

In addition to work on FWP lands, the department also provides funding toward weed management on private lands through the Block Management Program (Table 1). In 2021, FWP paid over $ 307,579 to private landowners specifically to weed control.

**Table 1. Summary of payments during 2021 to private landowners through the Block Management Program.**

| Region | Total BMAs | Weed Payment | Total Payment |
|---|---|---|---|
| 1 | 14 | $ 3,639.38 | $ 38,730.74 |
| 2 | 74 | $ 37,396.68 | $ 748,266.77 |
| 3 | 90 | $ 49,878.09 | $ 917,336.58 |
| 4 | 143 | $ 53,787.57 | $ 1,106,961.30 |
| 5 | 110 | $ 26,647.83 | $ 550,109.32 |
| 6 | 207 | $ 71,058.18 | $ 1,455,175.98 |
| 7 | 256 | $ 65,171.60 | $ 1,350,661.55 |
| **Totals:** | 894 | $ 305,579.31 | $ 6,167,242.24 |

FWP works closely with other government agencies including MT Department of Natural Resources and Conservation, U.S. Forest Service, MT Department of Agriculture, Bureau of Land Management and County Weed Coordinators along with private contractors and private landowners, to coordinate weed control efforts and to help contain the spread of noxious weeds throughout the state.

FWP also uses other collaborative efforts for weed control with public service programs such as AmeriCorps and the Montana Conservation Corps. Through these efforts, Montana State Parks AmeriCorps members were responsible for noxious weed removal projects at eleven different state parks throughout Montana. Duties within those hours included noxious weed management tasks such as recruiting volunteers for and conducting hand pulling weeds, biological control releases, and herbicide treatments which resulted in 479.32 acres of weeds treated in addition to conducting vegetation monitoring of known infested sites.

Fiscal Year 2021 saw the fourth round of applications for the Wildlife Habitat Improvement Program (WHIP) administered by FWP. WHIP was passed into law with the purpose of restoring ecologically important wildlife habitats by managing noxious weeds at watershed or landscape scales, typically involving collaborative efforts over multiple landownerships. The Act makes available up to $2M annually in federal Pittman-Robertson Wildlife Restoration (P-R) funds. In FY21 the WHIP Advisory Council voted to fund two submitted grants totaling $660,122. These projects started receiving WHIP funding on August 1st, 2020:

- **Judith Gap Headwaters WHIP Project – 5 Year Project**
    - 18,629 acres of priority wildlife habitat
    - 1,886 acres receiving herbicide treatments and biological controls

- $68,520 – Grant Funds (PR dollars); $22,840 Matching Funds; Total Project: $91,360

- **Blackfoot-Clearwater Watersheds WHIP Project** – **5 Year Project**
  - 103,751 acres of priority wildlife habitat
  - 5,888 acres receiving herbicide treatment, biological controls, and reseeding treatments
  - $426,572 Grant Funds (PR dollars); $142,190 Matching Funds; Total Project: $568,762

The Data Tables Section of this report, which follows, summarizes weed infestation and control activities over most of the sites managed by FWP. This data is collected annually from the staff responsible for managing these sites. Data are organized by Administrative Region (Figure 1) and then by Division and County.
