

3. Summary of Probable Impacts Guidance

Purpose and Use

FWP's *Summary of Probable Impacts (SPI) Guidance* is a simplified version of the FWIA. The locally required SPI portion of a subdivision application can include this guidance. FWP biologists are encouraged to review the completed SPI for accuracy. However, subdividers should not expect FWP to complete the SPI for them.

Recommended SPI Guidance

FWP recommends that the SPI address the following in summary form:

1. The species of fish and wildlife, including Species of Concern, that use all or part of the project planning area (proposed subdivision site plus a one-half-mile radius around it) on a year-round, seasonal, or periodic basis.
2. Existing vegetation, aquatic habitats, and wildlife habitats in the project planning area (e.g., water bodies and their associated riparian habitat, big game winter range, native grassland or shrubland habitats, areas used by black or grizzly bears).
3. The proposed subdivision's potential impacts on "wildlife and wildlife habitat," both during construction and at full build-out, taking any applicable fish and wildlife habitat standards into account.
