Ladies and Gentlemen:

Enclosed is an Environmental Assessment (EA) prepared for the Future Fisheries Improvement Program (FFIP). The Program tentatively plans to provide partial funding to a project that would install a fish screen on a small irrigation ditch connected to Rattlesnake Creek, which is a tributary to the Clark Fork River near Missoula (Missoula County). The intent of the project is to prevent entrainment of salmonids, improve fish passage, and allow better control of diverted water, which may increase survival and recruitment of salmonids on Rattlesnake Creek.

Please submit any comments by August 6, 2017 to Montana Fish, Wildlife & Parks at the address listed above. The funding for this project through the FFIP is contingent upon approval being granted by the Fish & Wildlife Commission. If you have any questions, feel free to contact me at (406) 444-2432. Please note that this draft EA will be considered as final if no substantive comments are received by the deadline listed above.

Sincerely,

Michelle McGree, Program Officer
Habitat Bureau
Fisheries Division

ENVIRONMENTAL ASSESSMENT
Fisheries Division
Montana Fish, Wildlife & Parks
Rattlesnake Creek Cobban fish screen

General Purpose: The 1995 Montana Legislature enacted sections 87-1-272 through 273, MCA that direct Montana Fish, Wildlife & Parks (FWP) to administer a Future Fisheries Improvement Program (FFIP). The program involves providing funding for physical projects to restore degraded fish habitat in streams and lakes for the purpose of improving wild fisheries. The legislature established an earmarked funding account to help accomplish this goal. Additionally, the 1999 Montana Legislature amended statute sections 87-1-273, 15-38-202 and Section 5, Chapter 463, Laws of 1995 to create a Bull Trout and cutthroat trout enhancement program. This legislation was amended again in 2013 to open the program to all native fish species (statute section 87-1-283). The program now calls for the enhancement of native fish through habitat restoration, natural reproduction and reductions in species competition by way of the FFIP.

The FFIP is proposing to provide partial funding to a project calling for the installation of a fish screen on the Cobban irrigation ditch connected to Rattlesnake Creek, which is a tributary to the Clark Fork River near Missoula (Missoula County). The intent of the project is to prevent entrainment of salmonids, improve fish passage, and allow better control of diverted water, which may increase survival and recruitment of salmonids on Rattlesnake Creek.

I. Location of Project:

The project site is located on Rattlesnake Creek, a tributary to the Clark Fork River, within Township 13 North, Range 19 West, Section 2 in Missoula County (Figures 1, 2). It is located on the north side of Missoula.

II. Need for the Project:

One goal within FWP's Statewide Fisheries Management Plan for the fisheries management program is to "protect, maintain, and restore native fish populations, their habitats, life cycles, and genetic diversity to ensure stewardship of native species and to ensure angling opportunities whenever possible." By implementing habitat restoration projects through the FFIP, this critical goal can be achieved. This project addresses entrainment, passage, and survival of many salmonids within the Clark Fork drainage, including the native species Westslope Cutthroat Trout, Bull Trout, and Mountain Whitefish.

III. Scope of the Project:

This project involves the removal of the existing, non-functional Brencaill fish screen and installation of a new vertical plate, paddle wheel driven fish screen. The new structure will be located just downstream of the existing headgate and include a bypass/return pipe to Rattlesnake Creek to prevent fish entrainment and establish year-round fish passage. This project is a continuation of upgrading fish screens in the Rattlesnake Creek drainage. The intent of the project is to prevent fish entrainment and increase spawning habitat for salmonids in the

Rattlesnake Creek drainage.

The total estimated cost for this project is \$36,895. Of this total, the FFIP would be contributing up to \$14,000. The remaining funds will come from other sources and from in-kind services:

Contributor	In-kind services	In-kind cash
WestSlope Chapter Trout Unlimited		\$15,000
Trout Unlimited	\$2,200	\$3,695
Northwestern Energy		\$2,000
TOTAL = \$22,895		

IV. Environmental Impact Review Checklist:

Evaluation of the impacts of the Proposed Action including secondary and cumulative impacts on the Physical and Human Environment

Project Title: Rattlesnake Creek Cobban Fish Screen

Division/Bureau: Fisheries Division / Habitat Bureau (FFIP)

Description of Project: The FFIP tentatively plans to provide partial funding to a project calling for the installation of a fish screen on a small irrigation ditch connected to Rattlesnake Creek.

A. POTENTIAL IMPACTS TO THE PHYSICAL ENVIRONMENT

Will the proposed action result in potential impacts to:	Unknown	Potentially Significant	Minor	None	Can Be Mitigated	Comments Provided
1. Geology and soil quality, stability and moisture				X		
2. Air quality or objectionable odors				X		
3. Water quality, quantity and distribution (surface or groundwater)			X			X
4. Existing water right or reservation				X		
5. Vegetation cover, quantity and quality			X			X
6. Unique, endangered, or fragile vegetative species				X		
7. Terrestrial or aquatic life and/or habitats			X			X
8. Unique, endangered, or fragile wildlife or fisheries species			X			X
9. Introduction of new species into an area				X		
10. Changes to abundance or movement of species			X			X

B. POTENTIAL IMPACTS ON THE HUMAN ENVIRONMENT

Will the proposed action result in potential impacts to:	Unknown	Potentially Significant	Minor	None	Can Be Mitigated	Comments Provided
1. Noise and/or electrical effects				X		
2. Land use				X		
3. Risk and/or health hazards				X		
4. Community impact				X		
5. Public services/taxes/utilities				X		
6. Potential revenue and/or project maintenance costs				X		
7. Aesthetics and recreation				X		
8. Cultural and historic resources				X		X
9. Evaluation of significance				X		
10. Generate public controversy				X		

V. Explanation of Potential Impacts on the Physical Environment.

3. Water quantity, quality, and distribution.

No changes in stream flow would occur in Rattlesnake Creek or the side channel as a result of the proposed project. Short-term increases in turbidity may occur during project construction. To minimize turbidity, operation of equipment in the stream channel will be minimized to the extent practicable. The Department of Environmental Quality will be contacted to determine narrative conditions required to meet short-term water quality standards and protect aquatic biota (318 authorization).

5. Vegetation cover, quantity and quality.

This project would affect vegetation during mobilization and construction, when equipment and materials are brought onsite to complete the project. The project site will be re-seeded with native grass seed mix.

7. Terrestrial and aquatic life habitats.

Construction activities that will affect terrestrial and aquatic life habitats will be short-term. Impacts would be confined to the project area and result from the installation of the fish screen (the existing headgate will be used). Care would be taken to avoid working in the stream at critical areas for reproduction and rearing. Long-term, this project should increase aquatic habitat through increased habitat connectivity.

8. Unique, endangered, or fragile wildlife or fisheries species.

This project may affect Bull Trout and Westslope Cutthroat Trout; both species are federally recognized and designated “Species of Concern” in Montana. The impacts on these species as a result of this project are predicted to be positive, potentially increasing recruitment and survival. Increased fish passage and reduced entrainment are key components of this project.

10. Changes to abundance or movement of species.

The installation of a fish screen should prevent the loss of salmonids down the Cobban ditch and improve upstream fish passage into the side channel. Reduced fish losses and improved passage is expected to improve both population abundance and movement of all species utilizing the project area. This impact is considered positive.

VI. Explanation of Impacts on the Human Environment.

8. Cultural and historic resources.

No cultural or historical resource impacts are anticipated. However, the State Historical Preservation Office will be notified of this project and any potential concerns will be addressed.

VII. Narrative Evaluation and Comment.

There are no anticipated cumulative effects.

VIII. Discussion and Evaluation of Reasonable Alternatives.

1. No Action Alternative.

If no funding is provided through the FFIP, the applicant would have to seek additional sources of funding to complete the project, or the fish would continue to be entrained in the Cobban ditch. Fish would not have upstream passage around the side channel and diversion.

2. The Proposed Alternative.

The proposed alternative intends to provide partial funding through the FFIP to install a fish screen on a small irrigation ditch connected to Rattlesnake Creek, which could prevent entrainment of salmonids, improve fish passage, and allow better control of diverted water, potentially increasing survival and recruitment of fish in Rattlesnake Creek.

IX. Environmental Assessment Conclusion Section.

1. Other groups or agencies contacted or which may have overlapping jurisdiction:

Missoula Conservation District, Montana Department of Natural Resources and Conservation, US Fish and Wildlife Service, US Army Corps of Engineers, Montana Department of Environmental Quality, State Historic Preservation Office

2. Evaluation and listing of mitigation, stipulation, or other control measures enforceable by the agency or another government agency:

None.

3. Is an EIS required? No.

We conclude, from this review, that the proposed activities will have an overall positive impact on the physical and human environment, and will therefore not require the extensive analysis associated with an EIS.

4. Level of public involvement.

The project application to the FFIP has been posted on the FWP webpage for public comment. No comments have been received to date. The proposed project was reviewed and supported by the public review panel of the FFIP. The proposed project also will be reviewed by the Fish & Wildlife Commission, and funding will be contingent upon their approval. The EA will be distributed to all individuals and groups listed on the cover letter and will be published on the FWP webpage: www.fwp.mt.gov

5. Duration of comment period?

Public comment will be accepted through 11:59 PM on August 6, 2017.

6. Person(s) responsible for preparing the EA.
