

Table 1. Recommended quotas by lion management unit (LMU) based on projections from a stable mountain lion population as adopted by the West-central Lion Ecological Population Objective Committee (LEPOC). Recommended quotas are presented by LMU for limited lion licenses and male and female quotas (harvest from limited lion licenses are anticipated to be primarily male). The total targeted harvest using the LEPOC recommendation is presented in comparison with the final quota (including limited lion licenses) adopted by the commission in 2023 and the preliminary harvest as reported through the mandatory harvest reporting database. The prior five-year average harvest for mountain lions within this ecoregion was 151/year.

LMU	Recommended Limited Lion Licenses	Recommended Male Quota	Recommended Female Quota	LEPOC Total Target	2023–2024 Adopted Total Quota	2023–2024 Realized Harvest
