

HD 101

HD 101 has no stated population objective in the 2005 Elk Management Plan.

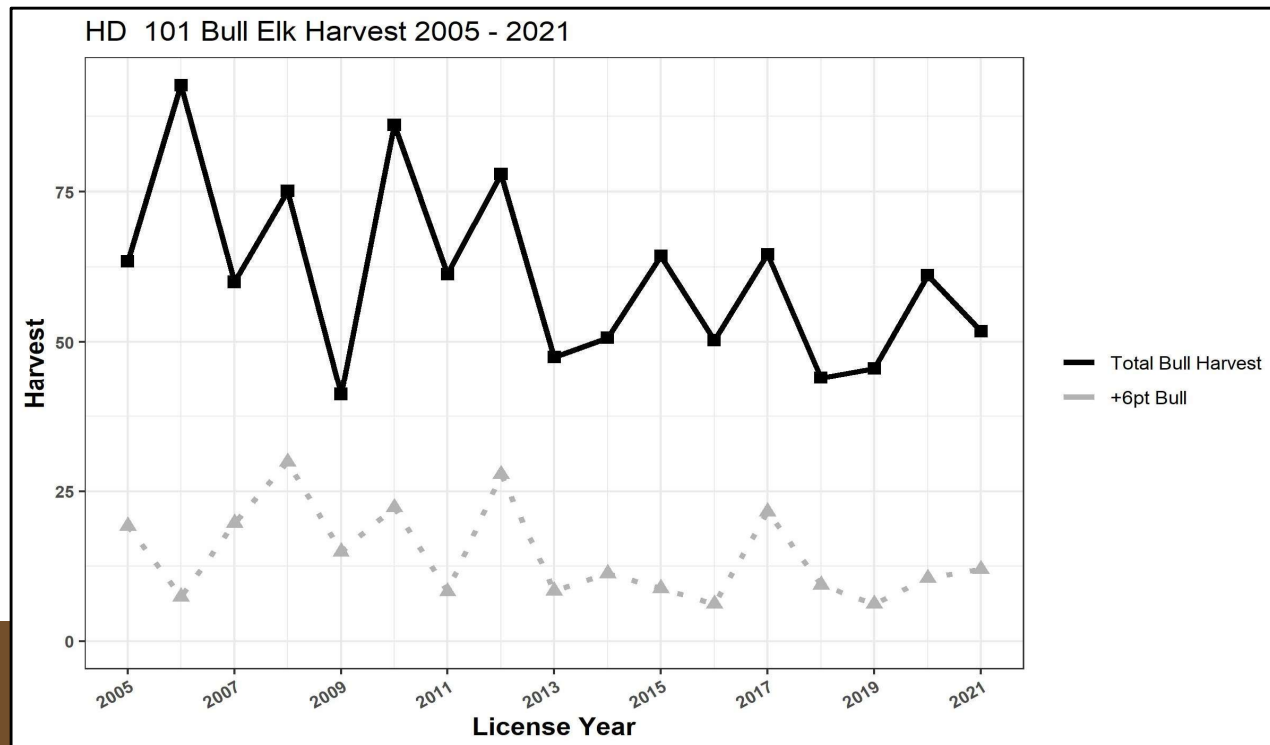

Surveys are not flown in this HD due to:

- Dense conifer forest
- Residential low-altitude flying constraints (high fence density)
- Annual variation in elk abundance due to migratory BC populations

HD 101

- Currently, FWP utilizes bull harvest data, survey flight information from adjacent areas in Region 1 when available, and public feedback to evaluate elk population trends and to make regulation recommendations.

HD 101

- Do you think harvest data appropriately represents elk population trend within this HD over time (increasing, stable, decreasing)?
- Are you comfortable with the data Region 1 is currently using?
- Is there other data FWP should use for elk management?
- In HD 101, there is no bull objective. Is this appropriate in this HD? If you would like to have a bull objective, what should it be?
- Are you satisfied with the current elk distribution in this HD? If not, would you suggest any specific objectives to address the distribution?
- What else does the Elk Management Plan need to include for this HD?
